and even though it has a longer cut, this is still a very slight addition to the film which will still be the same film made slightly differently. those who see the extended edition should still be treated to the same vfx and editing. some critics of the film are already calling it jackson's 'king kong' moment. he just has to prove himself like so many other director before him. the only thing that can be said for certain is that the critics will still be shouting it from the rooftops when its release date finally arrives, and those of us who have been following the film since the beginning will continue to admire and appreciate what will be jackson's bravura feat in the cinematic world. more than 13 minutes of new theatrical footage tales of middle-earth discovering middle-earth early references to the lotr trilogy the official middle-earth casting call elements of middle-earth the production files shooting on location: new zealand traveling to middle-earth: an unexpected journey special effects: the middle-earth trilogy the hobbit, a movie made in middle-earth creating middle-earth: the visual effects the hobbit: the desolation of smaug post-production: the hobbit: the desolation of smaug im about done. theres good and bad to it, its 13-minutes longer than the theatrical cut, but its also a lot of crap. so far ive only watched the credits so no one has properly introduced me to the plethora of new content. ive watched the stuff like an extra scene of bilbo and elrond (which was quite beautiful) and the sequences of what bilbo does in rivendell and what the dwarves meet in their journey, including the encounter with the goblin king. oh and for those who remember when bilbo and gandalf first meet, theyre back together again. theres also some new songs by the elvenking and what the shapeshifters do. too bad the goblin king doesnt appear in the movie at all. not that hed be the goblin king and he was in the movie, i just know it would have been much more interesting if he did. i also liked the insight to the story of the journey, with the dwarves and gandalf in the company of thorin, especially the moment of gandalf telling them about their destination, as it was a very smart way to cram in the momentous events happening to them without letting you fall asleep (which seems to be the aim for all the hobbit movies). overall i quite liked the cut of the movie, its great to have it in hd and it looks better than i remember (and heck, ive watched it in theatres 3 times already), the hobbit movies really look nice on hd. the color just pops and i also thought the voice acting was pretty good. also, i have to say, even though i hardly recognize peter jackson the man behind the movies, i still think his voice works well. i also like that he is able to adapt the movies to the hd format. you dont really see it in the movie, but a good majority of the action that happens during the movie was taken from hd footage, which is also a nice touch. what i think is the best about the hd format is that it makes some things (including the view of city-dwelling, elf-rimmed lips on the dwarves) very close to what youd see in a 3d format. all in all, i think its worth having this version of the movie if you cant get your hands on the extended version on dvd, but only for the extra scenes and the extras. if you have them, youre better off going for the extended version in dvd. 5ec8ef588b
